DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okano et al (Japan 61-157741) in view of Klassen and Aono et al (Japan 2001-234798). Okano et al discloses determining airflow using an intake pressure sensor in one of a plurality of intake branches. Each branch has a throttle valve 12. In column 3, lines 38-50, Klassen teaches that for determining engine airflow, an airflow sensor and an intake pressure sensor may be used interchangeably. Aono et al teaches modifying an airflow signal to determine airflow for each engine cylinder and then determining a corresponding fuel injection amount. It would have been obvious to one with ordinary skill in the art at the time the invention was made to modify Okano et al to replace the intake pressure sensor with an airflow sensor, as suggested by Klassen, and further to process the airflow signal to determine airflow and fuel amounts for each cylinder, as taught by Aono et al, to accurately control the air-fuel ratio of each cylinder to improve combustion.

Conclusion

The airflow detectors made of record and not relied upon are considered pertinent to applicant's disclosure.
